

# Student Success Story

## MyMathLab<sup>®</sup>

### Bryan Andrada

Hometown: Albuquerque, NM

School: University of New Mexico

**Ambition/Career Goal:** Currently, I am involved in the Environmental Sciences, but I have a vision of expanding that knowledge.

**In my free time...** I am an avid cyclist and enjoy the outdoors in every regard. Most of all, I love spending time with my two sons.

### How did using MyMathLab help you succeed in your course?

Juggling kids, school, and work can be quite demanding. Having the flexibility of the online curriculum helped to ensure that I could be equally successful in many other important aspects of my life. It was very comforting to be able to work through the examples that were provided by MyMathLab, the eText, as well as the various tutorials at my disposal. Unlimited trial and error, combined with multiple tools for problem solving, played a big role in my success.

### How will your success using MyMathLab affect your future?

Knowing that these types of programs are available, I will be more apt to continue with online courses. I feel that using a technology like MyMathLab allows instructors more time for one-on-one interaction with individual students.
