

# Student Success Story

## MyMathLab®

### Gilles Ngongban Che

Hometown: Waldorf, MD

School: College of Southern Maryland

**Ambition/Career Goal:** Play professional soccer or become a sheriff

**In my free time...** I play soccer and ride my bike.

### How did using MyMathLab help you succeed in your course?

At the beginning of my course, I could understand only a few things the teacher did in class. But as soon as I went home and did my homework on MyMathLab, there was a great increase in my understanding of the subject matter. Problems I could not solve using my teacher's explanation, MyMathLab helped me solve easily. I felt more prepared after using MyMathLab because with the program, you can solve as many problems as you want to. Also, when you ask for help on a problem, it doesn't just give you the answer—it makes you solve the problem by breaking the problem down into small steps with easy questions. This makes understanding easy for students. It is easy for me to say that it's thanks to my professor and especially the MyMathLab program that I got an A in this course.

### How will your success using MyMathLab affect your future?

My success with the MyMathLab has already affected my college experience by giving me a good grade. I know that all I have learned with this program will be of great help in the future.
