

Student Success Story

MyMathLab[®]

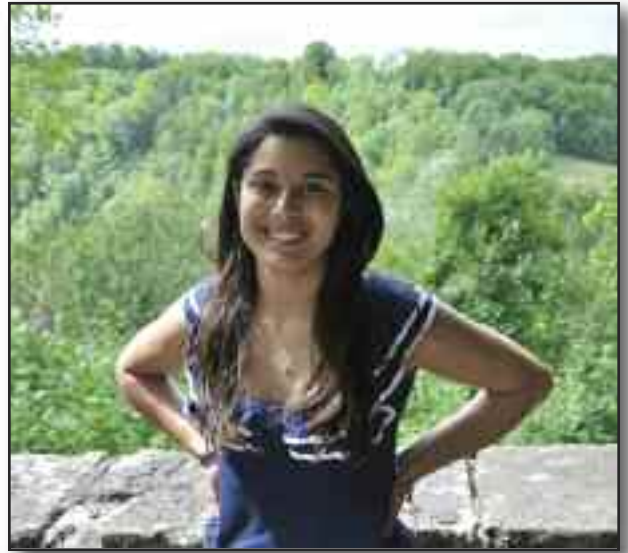

Micaela (Mica) Aguilar

Hometown: San Antonio, TX

School: University of Alabama

Ambition/Career Goal: Electrical Engineer

In my free time... I enjoy playing tennis, piano, and cello; traveling, photography, drawing, and reading.

How did using MyMathLab help you succeed in your course?

MyMathLab is great because it provides tutorials and interactive practice problems for you to use when you have trouble understanding a concept or completing a homework problem. I did practice problems before every test, and I always felt more confident and better prepared going into the exam after doing them. I had only gotten a B in Calculus I in high school, but after taking it while using MyMathLab, I earned an A in my college Calculus I class.

How will your success using MyMathLab affect your future?

MyMathLab's interface was so user-friendly and easy to use, it really helped me feel more prepared for the rest of my college career. After using MyMathLab for Calculus I, I was able to go into Calculus II feeling much more confident than I would have been. I am also no longer afraid of having to take higher math classes in the future, such as Calculus III and Differential Equations, because I feel that MyMathLab helped me to build a strong foundation with Calculus I.
